Your name: haoyuan wang

Your team: FRACAS2

What information/experiences do you hope to gain from participating in CITS3200?

Communication skills: Working in a team requires communicating effectively with team members and ensuring that everyone understands their tasks and goals.

Use of team collaboration tools: such as version control tools (such as Git), project management tools (such as Jira or Trello), and communication tools (such as Slack or Teams).

Project management: Understand the life cycle of a project, such as requirements gathering, design, development, testing, and deployment, and how to allocate time and resources to each phase.

Conflict resolution: There will inevitably be differences of opinion or conflicts in a team, and learning how to properly handle these conflicts is the key to teamwork.

Division and collaboration: Understand the roles and responsibilities of each member of the team, and learn to trust team members to ensure the smooth running of the project.

Feedback and review: Accept code reviews and feedback from peers and learn to provide constructive feedback on the work of others.

What is your perception of how the team is working?

As far as my personal experience is concerned, the whole team is very positive and orderly. Each week, the leader sends out an action list to let everyone know what they should accomplish that week. At the same time, the communication between the team members is also very positive. and we will continue a group meeting immediately after each meeting with the client, in order to review the next week's goals and summarize the last week's things.

The team does have its strengths and areas for improvement. For instance, we're great at brainstorming and coming up with innovative ideas, but sometimes, our execution can be slow due to skill gap or some sick leaving. Maybe we can look into streamlining our communication channels.

Honestly, our team will facing some challenges started from this week. Because when it comes to the real thing, everyone's work will affect each other, which means that if one person's work is not completed on time, it will affect the progress of other people's tasks. The mission so far has not officially entered its busiest phase, which could be a serious problem if the volume of tasks increases in the future. So I think we will adjust our strategy at a later stage in case that happens.
